product line & new introductions

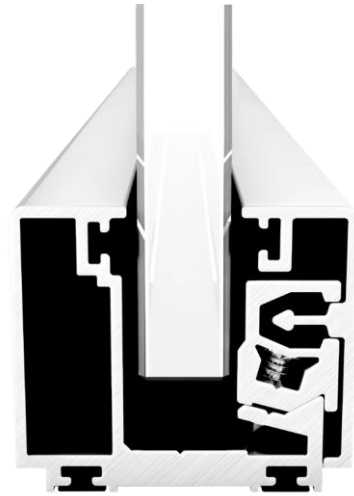

- standard line of single and double glazed partitions for every architectural application
- option for single or double glazing in a single profile
- curved/ angled partition capabilities
- switchable glazing options in single or double glazed
- Seamlessly integrate technology such as displays, card readers and room schedulers

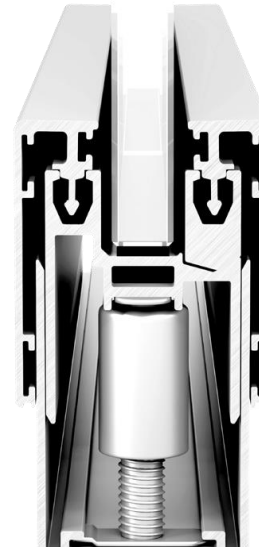

P900

- Single or double glazed partition
- 90 mm (3" or 4" thickness)
- up to STC 46

P600

- Single glazed minimal frame partition
- 60 mm (2.4" thickness)
- up to STC 36

P650

- Single glazed partition
- 60 mm (2.4" thickness)
- up to STC 36
- suitable for uneven floor conditions

P700

- Single or double glazed
- 65 mm (4" thickness)
- up to STC 46

acoustic performance

At IAP we have made a large commitment towards improving acoustic performance because we understand that excessive exposure to noise generates stress in the office environment and can be harmful to human health.

DESCRIPTION	GLASS 1	GLASS 2
Full height glazing	3/8" Tempered	3/8" Tempered
Full height glazing	3/8" Laminated	3/8" Laminated
Full height glazing	3/8" Acoustic Laminated	3/8" Acoustic Laminated
Full height glazing	1/2" Acoustic Laminated	1/2" Acoustic Laminated
Solid elevation, melamine panels		
Solid elevation, steel panels		
Storewall		
Double glazed pivot door 3 15/16" w/ threshold seal	1/4" Tempered	1/4" Tempered
Double glazed pivot door 3 1/2" w/ threshold seal	1/4" Tempered	1/4" Tempered
Sliding pocket door	1/4" Tempered	1/4" Tempered

choose the finish

The finish of the partition system is what makes them stand out or be fully integrated into the interior environment. At IAP we can create surface finishes of any color, pattern, opacity and gloss.

La finitura è il vero volto delle partizioni, è ciò che le fa risaltare ed essere totalmente originali ed inimitabili. Possiamo creare superfici di qualsiasi colore, motivo, opacità e lucentezza.

Anodizing

Anodizing is an electrochemical treatment that creates a protective coat on the aluminum surface which, in addition to preserving the metal, makes it shiny and bright.

Anodizing è un trattamento elettrochimico che crea un rivestimento protettivo sulla superficie in alluminio che, oltre a preservare il metallo, lo rende lucido e luminoso.

Polish

This kind of finish gives aluminum a shiny and bright appearance. It is obtained by cleaning the surface of rough aluminum with a mechanical treatment, followed by an electrochemical process.

Questo tipo di finitura conferisce all'alluminio un aspetto lucido e brillante. Si ottiene pulendo la superficie di alluminio grezzo con un trattamento meccanico, seguito da un processo elettrochimico.

Sublimations

Sublimation allows you to apply a pattern directly on the aluminum surface, perfectly reproducing materials such as wood and marble.

La sublimazione consente di applicare una texture direttamente sulla superficie in alluminio, riproducendo perfettamente materiali come legni e marmi.

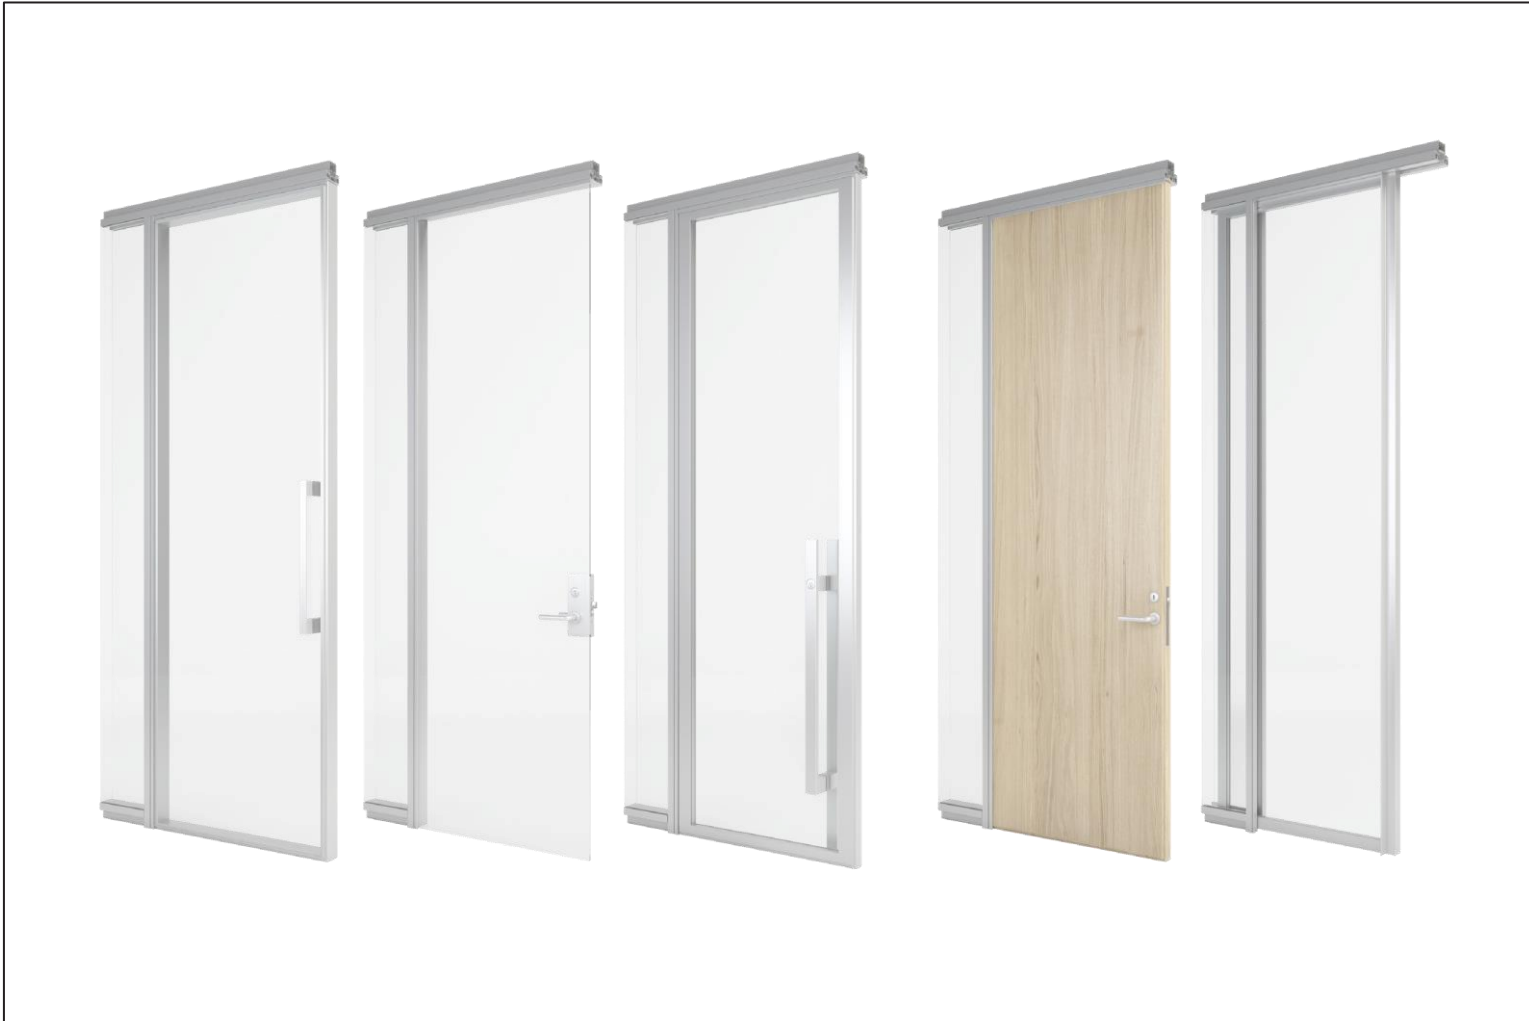

Liquid & Powder coating

These finishes allow for a virtually unlimited choice of color. The paint types are copious and suitable for different needs. Different degrees of gloss and opacity can be obtained.

Queste finiture consentono una scelta di colore praticamente illimitata. I tipi di vernice sono abbondanti e adatti a diverse esigenze. Si possono ottenere diversi gradi di brillantezza e opacità.

doors & hardware

- double and single glazed swing or sliding door options
- custom wood/ millwork finishes
- integrated hardware finishes, discrete and elegant locking functions
- integrated closers/ hold open features
- maglock and other card reader device integration and automation
